

Pellet Fix Binder Powder

200ml £2.99

"Bag'em's Krill Pellet Binder has been a resounding success due to the versatility of the product. Although it is a pellet binder, it can also be used for creating balls of most small baits such as hemp or maggots, allowing the angler to catapult them further than would be possible loose.

Amer Jawad as featured in Angling Times

Both the Krill and the new 'Sweet' Pellet Binder slow the breakdown of the loose feed allowing a more concentrated area of feed in deeper water, leaving no residue around the baits but still leaking out attraction in the water due to the solubility of the ingredients. It can also be used to add binding properties to groundbait without increasing food content. Even in cold water, the breakdown times are not extended by much leaving the angler plenty of options for use.

On days when soft pellets in an open ended or method feeder is better than groundbait, the pellet binder excels and is very versatile for uses in shallow or deep venues. During last summers matches on certain venues me and many other anglers started using, with good results, more and more sweeter groundbait mixes. One venue springs to mind were sweet mixes worked for big catches of Bream and skimmers combined with micro pellets.

The new sweet pellet fix binder powder gives off a sweet creamy vanilla and coconut aroma, so it makes a perfect and equally versatile welcome addition to the

Bag'em range. A good combination with Bagem's Supreme sweet fishmeal ground baits and super skimmer range"
